Field-to-Value:
Asset Recovery Redefined

RGX Oil & Gas Use Case

The Challenges

Environmental Liability: Unlike servers, O&G equipment carries residual hazardous materials.

Safety & Compliance Risks: Handling heavy, pressurized equipment requires specialized local vendors to avoid accidents and regulatory fines.

Wasted Value: Traditional liquidators often treat a $500,000 drilling rig or compressor as bulk scrap metal, ignoring the high resale value of refurbished components.

Logistical Complexity: Moving heavy equipment from remote wellheads or offshore rigs to a central hubis a massive cost-sink. The "Administrative Drain" is the nightmare of specialized freight permits and multiple transit vendors.

The Solution

Load 1: Following standard processes (Regional Model), decommissioned wellhead equipment was shipped 490 miles from Midland, TX, to a regional scrap yard in Houston, TX.

Load 2: By inviting local vendors to bid on the RGX platform (Local Model), a specialized asset recovery provider in Odessa, TX, was identified and picked up the equipment within 24 hours

The Difference: 465 miles. By processing materials closer to the source, the shipment traveled only 25 miles instead of 490.

Why RGX?

- **Marketplace, Not a Middleman:** We provide a neutral platform for competitive bidding, to help you get the best ROI on decommissioned equipment.
- **Built for Enterprise Reality:** Designed to manage thousands of locations with lean internal teams, providing national coverage through a single contract.
- **Real-Time Transparency:** Track assets from pickup to final disposition with customizable reporting and automated compliance records.
- **Green Glove Support:** Flexible service layers allow you to choose between self- or full-service.
- **Rapid Vendor Identification:** The RGX platform can identify local vendors within 24-48 hours, replacing the traditional weeks-long RFP process.

Stop paying for disposal.
Start capturing value.
